Continuation of 3. NOTE: the issues of "waves being supplied through a window of a side wall" and the application of the containers in only one chamber have not been addressed in previous claims..

Continuation of 11, does NOT place the application in condition for allowance because: Applicants state that they amend claims 1 and 2 to clarify the claim language; for the record, the clarifications of the intent of the claims does not preclude the validity of prior arguments pertaining to applied art.

Applicant's arguments are largely addressed in regards to amended claims, but since some arguments are applicable to the final action, response will be provided.

Applicants argue that the prior art does not teach the sizing of "only one chamber", however, the chamber taught by Laurent includes multiple confinements - the sizing of the confinements encompasses the sizing of the chamber, since the confinements comprise the chamber.

While each microwave confinement only holds a single bottle and a single microwave field, there are as such multiples within the the chamber. Each electromagnetic field is used to treat one container at each time, per applicant's argument, but since there are multiples, this limitation is taught. Laurent teaches that TM mode is created due to the size/shape of the confinement, therefore suggesting that the electromagnetic field within each are likewise created according to the TM mode.

Furthermore, the coupling mode would be the same in Laurent's invention, therefore "a coupling mode" would generate multiple electromagnetic fields (regardless of the coupling mode). Related to arguments above, Laurent teaches the containers disposed coaxially to electromagnetic fields.

Laurent does not disclose supply of waves through a windown in a sidewall, however, as already noted, this is a new issue.
